DETAILED ACTION

Claim Rejections - 35 USC § 102

- 1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- Claims 13 and 15-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Boxer.
 Boxer discloses a hydration system comprising:
 - A flexible pouch including a plurality of layers (82, 84) all joined together to form at least two compartments (Figure 7);
 - At least one of the compartments is filled with a thermal capacitance medium (80);
 - The pouch is formed by a first bag or sleeve (82) surrounded by a second bag or sleeve (84);
 - The medium consisting of a cooling or heating medium would be inherent depending on the temperature of insulation relative to the liquid;
 - A conduit (48) having an inlet (53) and an outlet (54);
 - A valve (56) at the conduit outlet.
- 3. Claims 13, 19, and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Gleason et al.

Gleason discloses a hydration system comprising:

- A flexible pouch including a plurality of layers forming at least two compartments (14, 18);
- At least one of the compartments is filled with a thermal capacitance medium

Application/Control Number: 10/043,657

Art Unit: 3727

(28), which is capable of being a heating medium to the same degree claimed;

Page 3

A conduit having an inlet (top of 18, best shown in Figure 2) and an outlet (22);
 and

• A valve (22) at the conduit outlet.

Claim Rejections - 35 USC § 103

- 4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 5. Claims 23-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harris in view of Johnston.

Harris discloses a method of preparing an integral thermal medium hydration system comprising providing a hydration pouch (60) having a compartment containing gel (Column 5, line 6) and an empty compartment for drinking fluid (Column 5, line 31), chilling or heating the hydration pouch (Column 5, lines 6-7), filling the compartment with drinking fluid through a sealable opening (66), and placing the pouch in a pack (10) but does not teach the pack wearable by a user. However, Johnston teaches a pack (10) wearable (19, 20) by a user. It would have been obvious to attach the shoulder straps of Johnston to the pack of Harris. Doing so would provide an easier means of transporting.

Regarding claims 24 and 26, Harris discloses the claimed invention except for chilling is performed in a freezer and heating performed in a microwave. It is well known to freeze items in a freezer and to heat items in a microwave, therefore it would have been obvious to chill the insert in a freezer and/or heat the insert in a microwave since applicant has not disclosed that

chilling or heating solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well.

6. Claims 13 and 15-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fawcett in view of Boxer and further in view of Satterfield.

Fawcett discloses a hydration system comprising a pack (16) having a compartment for drinking fluid (30), a conduit (20) having an inlet (32) in fluid communication with the compartment and an outlet capped by a bite valve (18), and straps (26, 27), but does not teach the pouch including a plurality of layers all joined together to form at least two compartments and a layer forming a compartment filled with gel. However, Boxer teaches a hydration system comprising a flexible pouch including a plurality of layers all joined together to form at least two compartments (Figure 7). It would have been obvious to replace the compartment of Fawcett with the multi-layer compartment of Boxer, since it is well known to insulate drinking bags.

Regarding the layer being filled with gel, Satterfield teaches a receptacle (15) being filled with a gel refrigerant (17). It would have been obvious to replace the insulation of the modified hydration system of Fawcett with the refrigerant of Satterfield, since it is obvious to substitute gel for insulation. Doing so would increase the thermal insulating factor and thermal conductivity.

Conclusion

7. This is a continuation of applicant's earlier Application No. 10/043,657. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first

Art Unit: 3727

action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maerena W. Brevard whose telephone number is 703/305-0037. The examiner can normally be reached on M-Th; 8:00 AM-6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee W. Young can be reached on 703/308-2572. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
